

What is claimed is:

1. A client terminal apparatus for generating content, comprising:

an input device adapted to input melody information to said client terminal apparatus;

a transmitter coupled with said input device and adapted to transmit the melody information, inputted via said input device, to a server; and

a receiver adapted to receive, from the server, content information created by imparting an additional value to the melody information transmitted via said transmitter to the server.

2. A client terminal apparatus as claimed in claim 1 wherein the content information received via said receiver is sample content information that is intended for test listening or test viewing,

said transmitter is further adapted to transmit, to the server, a request for delivery of regular content information, and

said receiver is further adapted to receive the regular content information delivered from the server in response to the request for delivery.

3. A client terminal apparatus as claimed in claim 1 wherein said input device is further adapted to input parameter information to said client terminal apparatus,

01508654453.200 - 6 - 2014-03-07

said transmitter is further adapted to transmit the parameter information, inputted via said input device, to the server, and

 said receiver is further adapted to receive, from the server, content information having an additional value corresponding to the parameter information transmitted via said transmitter to the server.

4. A client terminal apparatus as claimed in claim 3 wherein the parameter information is inputted via said input device by being selected from among a plurality of items of previously-provided parameter information.

5. A client terminal apparatus as claimed in claim 1 wherein the content information received via said receiver and having the additional value imparted thereto includes at least one of:

 harmony information matching with the input melody information transmitted via said transmitter;

 backing information matching with the input melody information;

 left-hand performance information matching with the input melody information, with the input melody information assumed to be performance information generated through a performance on a keyboard-based musical instrument by a right hand;

 both-hand performance information matching with the input melody information;

performance expression information for the input melody information;

musical composition information of a single music piece with the input melody information used as a motif thereof;

other melody information made by modifying the input melody information;

information made by converting waveform data of the input melody information into tone-generator driving information of a predetermined format; and

musical score picture information corresponding to at least one of the information listed above.

6. A client terminal apparatus as claimed in claim 1 wherein said transmitter and said receiver communicate with the server by way of an information communication media.

7. A server apparatus for generating content, comprising:

a receiver adapted to receive melody information from a client terminal;

a processor device coupled with said receiver and adapted to create content information by imparting an additional value to the melody information received via said receiver; and

a delivery device coupled with said processor device and adapted to deliver, to the client terminal, the content information created by said processor device.

8. A server apparatus as claimed in claim 7 wherein said processor device is adapted to create regular content information and sample content information that is intended for test listening or test viewing, and

 said delivery device delivers, to the client terminal, the sample content information created by said processor device, and, in response to a request for delivery of the regular content information by the client terminal, delivers, to the client terminal, the regular content information created by said processor device.

9. A server apparatus as claimed in claim 8 which further comprises a device for performing a billing process on the basis of the request for delivery of the regular content information by the client terminal.

10. A server apparatus as claimed in claim 7 wherein said receiver is further adapted to receive parameter information from the client terminal, and

 said processor device is adapted to create content information having an additional value corresponding to the parameter information received via said receiver.

11. A server apparatus as claimed in claim 7 wherein the content information created by said processor device and having the additional value imparted thereto includes at least one of:

 harmony information matching with the melody

information received via said receiver;

backing information matching with the received melody information;

left-hand performance information matching with the received melody information, with the received melody information assumed to be performance information generated through a performance on a keyboard-based musical instrument by a right hand;

both-hand performance information matching with the received melody information;

performance expression information for the received melody information;

musical composition information of a single music piece with the received melody information used as a motif thereof;

other melody information made by modifying the received melody information;

information made by converting waveform data of the received melody information into tone-generator driving information of a predetermined format; and

musical score picture information corresponding to at least one of the information listed above.

12. A server apparatus as claimed in claim 7 wherein said receiver and said transmitter communicate with the client terminal by way of an information communication media.

13. A client terminal apparatus for generating content, comprising:

an input device adapted to input musical material information to said client terminal apparatus, the musical material information being representative of a musical material, other than a melody, of a music piece;

a transmitter coupled with said input device and adapted to transmit the musical material information, inputted via said input device, to a server; and

a receiver adapted to receive, from the server, content information created by imparting an additional value to the musical material melody transmitted via said transmitter to the server.

14. A client terminal apparatus as claimed in claim 13 wherein the content information received via said receiver is sample content information that is intended for test listening or test viewing,

said transmitter is further adapted to transmit, to the server, a request for delivery of regular content information, and

said receiver is further adapted to receive the regular content information delivered from the server in response to the request for delivery.

15. A client terminal apparatus as claimed in claim 13 wherein said input device is further adapted to input parameter information to said client terminal apparatus,

said transmitter is further adapted to transmit the parameter information, inputted via said input device, to the server, and

said receiver is further adapted to receive, from the server, content information having an additional value corresponding to the parameter information transmitted via said transmitter to the server.

16. A server apparatus for generating content, comprising:

a receiver adapted to receive musical material information from a client terminal, the musical material information being representative of a musical material, other than a melody, of a music piece;

a processor device coupled with said receiver and adapted to create content information by imparting an additional value to the musical material information received via said receiver; and

a delivery device coupled with said processor device and adapted to deliver, to the client terminal, the content information created by said processor device.

17. A server apparatus as claimed in claim 16 wherein said processor device is adapted to create regular content information and sample content information that is intended for test listening or test viewing, and

the sample content information created by said processor said delivery device delivers, to the client terminal.

device, and, in response to a request for delivery of the regular content information by the client terminal, delivers, to the client terminal, the regular content information created by said processor device.

18. A server apparatus as claimed in claim 16 wherein said receiver is further adapted to receive parameter information from the client terminal, and

 said processor device is adapted to create content information having an additional value corresponding to the parameter information received via said receiver.

19. A method for generating content, comprising:

 a step of inputting melody information;

 a step of transmitting the melody information, inputted via said step of inputting, to a server; and
 a step of receiving, from the server, content information created by imparting an additional value to the melody information transmitted via said step of transmitting to the server.

20. A method for generating content, comprising:

 a step of receiving melody information from a client terminal;

 a step of creating content information by imparting an additional value to the melody information received via said step of receiving; and

 a step of delivering, to the client terminal, the

2018 RELEASE UNDER E.O. 14176

content information created by said step of creating.

21. A method for generating content, comprising:

a step of inputting musical material information, the musical material information being representative of a musical material, other than a melody, of a music piece;

a step of transmitting the musical material information, inputted via said step of inputting, to a server; and

a step of receiving, from the server, content information created by imparting an additional value to the musical material melody transmitted via said step of transmitting to the server.

22. A method for generating content, comprising:

a step of receiving musical material information from a client terminal, the musical material information being representative of a musical material, other than a melody, of a music piece;

a step of creating content information by imparting an additional value to the musical material information received via said step of receiving; and

a step of delivering, to the client terminal, the content information created by said step of creating.

23. A program containing a group of instructions to cause a computer of a client terminal to perform a method for generating content, said method comprising:

a step of inputting melody information;
 a step of transmitting the melody information, inputted via said step of inputting, to a server; and
 a step of receiving, from the server, content information created by imparting an additional value to the melody information transmitted via said step of transmitting to the server.

24. A program containing a group of instructions to cause a computer of a server to perform a method for generating content, said method comprising:

 a step of receiving melody information from a client terminal;

 a step of creating content information by imparting an additional value to the melody information received via said step of receiving; and

 a step of delivering, to the client terminal, the content information created by said step of creating.

25. A program containing a group of instructions to cause a computer of a client terminal to perform a method for generating content, said method comprising:

 a step of inputting musical material information, the musical material information being representative of a musical material, other than a melody, of a music piece;

 a step of transmitting the musical material information, inputted via said step of inputting, to a server; and

a step of receiving, from the server, content information created by imparting an additional value to the musical material melody transmitted via said step of transmitting to the server.

26. A program containing a group of instructions to cause a computer of a server to perform a method for generating content, said method comprising:

a step of receiving musical material information from a client terminal, the musical material information being representative of a musical material, other than a melody, of a music piece;

a step of creating content information by imparting an additional value to the musical material information received via said step of receiving; and

a step of delivering, to the client terminal, the content information created by said step of creating.

27. A client terminal apparatus for generating content, comprising:

an input device adapted to input parameter information to said client terminal apparatus;

a transmitter coupled with said input device and adapted to transmit the parameter information, inputted via said input device, to a server; and

a receiver adapted to receive, from the server, musical content information created on the basis of the parameter information transmitted via said transmitter to

the server.

28. A client terminal apparatus as claimed in claim 27 wherein said receiver is further adapted to receive, from said server, screen information for inputting desired parameter information, and said input device is adapted to input the parameter information by use of the screen information received by said receiver.

29. A client terminal apparatus as claimed in claim 27 wherein said transmitter and said receiver communicate with the server by way of an information communication media.

30. A server apparatus for generating content, comprising:

a receiver adapted to receive parameter information from a client terminal;

a processor device coupled with said receiver and adapted to create musical content information on the basis of parameter information received via said receiver; and

a delivery device coupled with said processor device and adapted to deliver, to the client terminal, the musical content information created by said processor device.

31. A server apparatus as claimed in claim 30 wherein said delivery device is further adapted to deliver, to the client terminal, screen information to be used by the client terminal to input desired parameter information, and

said receiver is adapted to receive, from the client terminal, the parameter information inputted by the client terminal using the screen information.

32. A server apparatus as claimed in claim 30 wherein said receiver and said delivery device communicate with the client terminal by way of an information communication media.

33. A method for generating content, comprising:

 a step of inputting parameter information;
 a step of transmitting the parameter information, inputted via said step of inputting, to a server; and
 a step of receiving, from the server, musical content information created on the basis of the parameter information transmitted via said step of transmitting to the server.

34. A method for generating content, comprising:

 a step of receiving parameter information from a client terminal;
 a step of creating musical content information on the basis of parameter information received via said step of receiving; and
 a step of delivering, to the client terminal, the musical content information created by said step of creating.

35. A program containing a group of instructions to cause a computer of a client terminal to perform a method for generating content, comprising:

 a step of inputting parameter information;
 a step of transmitting the parameter information, inputted via said step of inputting, to a server; and
 a step of receiving, from the server, musical content information created on the basis of the parameter information transmitted via said step of transmitting to the server.

36. A program containing a group of instructions to cause a computer of a server to perform a method for generating content, comprising:

 a step of receiving parameter information from a client terminal;
 a step of creating musical content information on the basis of parameter information received via said step of receiving; and
 a step of delivering, to the client terminal, the musical content information created by said step of creating.
